Storm Water Phase II Residential/Business Owners Compliance

All residential and business owners, within the city limits of Crowley are required (by city ordinance and the storm water regulations), to help keep our channels, creeks and streams free of contaminants. Storm water eventually winds up in our rivers and lakes, which is our main source for drinking water. The following is a list of things you can do to keep from contaminating our storm water system.

- * Leave all grass clippings on the lawn or bagged properly for disposal.
- * Do not leave trash or debris on your property, which could be considered an eyesore or nuisance.
- * Do not dump oil, chemicals, pesticides, paint or any pollutant into the storm drain inlet pipe, channel or creek.
- * Do not allow automobiles or equipment to leak fluids in driveways or on the street pavement. This type of discharge will end up in the storm drain after a rain.
- * Use pesticides wisely

Things You Can Do to Practice Good Housekeeping

- * Limit the use of soap when washing your car in the driveway. We recommend not using soap at all because detergent is one of the most common pollutants in storm water.
- * Any old paint or household chemicals can be disposed of properly by taking them to an Environmental Collection Center. More information can be obtained by calling (817) 297-2201 ext. 3000.
- * Clean up after your pets. Pet waste left on the ground will wash into creeks and lakes through the storm drain system. Pet waste will contribute harmful bacteria, parasites and viruses into our water ways.
- * Remember not to litter! Litter is a significant source of storm water pollution. Debris will block our storm drains, which can lead to flooding, impaired water quality and may be a hazard to wildlife. Keeping a litterbag in your car is a very good idea.

Mandatory Water Conservation

To maintain the long-range integrity of our region's water supply, the City of Crowley is joining other communities that obtain water from the City of Fort Worth in implementing mandatory water conservation measures. Your cooperation and support plays a critical role in the success of our conservation efforts, and we appreciate your help and understanding. Partnering together to conserve water through this drought and beyond will ensure us a continued secure water source for decades to come. **All Crowley water customers are expected to comply with the following mandatory water conservation measures:**

No Watering between 10 a.m. and 6 p.m. unless by hand, soaker hose or drip irrigation

Except for hand watering, the use of a drip irrigation system, and/or the use of soaker hoses, a person commits an offense if a person irrigates, waters or causes or permits the irrigation or watering of any lawn or landscape located on premises owned, leased, or managed by that person between the hours of 10 a.m. and 6 p.m. year-round.

Do not allow substantial amounts of water to fall on impervious areas instead of a lawn or landscape, such that

Prevent Water Runoff

a constant stream overflows to the street or other drainage area. Position sprinklers to avoid water runoff. When cleaning your driveway, patio or deck, use a broom instead of a water hose. While washing the car or truck, use a sponge and bucket. Place nozzle on the hose to stop the flow of water between rinsing. All water customers are required to properly set and maintain sprinklers in a manner that prevents the waste of water. Inspect sprinkler heads regularly to make sure none are missing, broken, leaking, clogged, pushed too

Properly Maintain Sprinklers

far into the ground or spraying in the wrong direction.

The use of irrigation systems or other lawn or landscape watering devices during any form of precipitation is prohibited. Rain and freeze sensors are required on all new irrigation systems. The use of rain and freeze

Rain and Freeze Sensors Required on New Irrigation Systems

sensors will prevent overwatering and costly water line breaks. All new single-family irrigations systems and new agricultural irrigation systems must be installed with rain and freeze sensors. The city has required rain and freeze sensors on other irrigation systems since June 2006.

When a first violation is observed, the City of Crowley will educate the resident or business on the need for water conservation and may issue a warning as provided in Chapter 4. Section 1-15 of the Crowley Code of Ordinances. When additional violations are observed at the same location, citations shall be issued with the

Compliance

possible fines of not more than \$500, and the possibility of water restricting devices installed to reduce the flow of water to the violator.

Questions regarding the city's mandatory water conservation efforts may be directed to the Public Works Department at (817) 297-2201. Additional mandatory water conservation measures may be put in place in the future if drought persists. Please watch your water bills, city newsletters and <http://www.ci.crowley.tx.us>
