**Crews to Spray for WNV Near Baldwin Avenue on Nov. 17**

The City had one sample that came back positive for West Nile Virus at the Baldwin Avenue trap.

Crews will spray in that area after sunset on Tuesday, Nov. 17.

Please let city officials know of any excessive standing water in the area that may be harboring mosquito larvae by calling 817-297-2201.

Please remain indoors if possible during spraying time.

Here are CDC's top tips for avoiding West Nile Virus

- Use insect repellents that contain an EPA-registered active ingredient whenever you're outdoors
- Wear long-sleeved shirts and long pants outdoors at dawn and dusk, or consider staying indoors during those times when mosquitoes are most active
- Install or repair screens on windows and doors to keep mosquitoes out
- Remove the standing water that allows mosquitoes to breed; that includes small pools of water in unlikely places such as flower pots, buckets and barrels. Change the water in pet dishes and replace the water in bird baths weekly
- Drill holes in tire swings so that water drains out. Keep children's wading pools empty and on their sides when they're not being used
