

# rowley 2014 Annual Drinking Water Quality Report

(Consumer Confidence Report)

Customer Service: 817-297-2201 Emergency - Nights & Weekends: 817-297-2276

# Special Notice

You may be more vulnerable than the general population to certain microbial contaminants, such as Cryptosporidium, in drinking water, Infants, some elderly or immunocompromised such as those undergoing chemotherapy for cancer; persons who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders can be particularly at risk for infections. You should seek advice about drinking water from your Physician or health care providers. Additional guidelines for appropriate means to lessen the risk of infection by Cryptosporidium are available from the Safe Drinking Water Hotline at (800) 426-4791.

# **Public Participation Opportunities**

**Date:** City Council meetings are the 1<sup>st</sup> and 3<sup>rd</sup> Thursday of

each month **Time:** 7:00 pm

**Location:** City Hall, Council Chambers

**Phone No:** 817-297-2201

To learn about future public meetings (concerning your drinking water), or to request to schedule one, please call us or check our website at www.ci.crowley.tx.us

# Where do we get our drinking water?

Our drinking water is obtained from Ground (minimal) and Purchased Surface (majority) water sources. It comes from the following Lake/River/Reservoir/Aquifer: Ground Water is from the Trinity AND Trinity/Paluxy Aquifers; Surface Water is purchased from the City of Fort Worth (Lake Worth, Eagle Mountain Lake, Lake Bridgeport, Richland Chambers Reservoir, Cedar Creek Reservoir, Lake Benbrook and Clear Fork Trinity River).

#### Source water assessment and its availability

The TCEQ completed an assessment of your source water and results indicate that some of your sources are susceptible to certain contaminants. The sampling requirements for your water system are based on this susceptibility and previous sample data. Any detections of these contaminants may be found in this Consumer Confident Report. For more information on source water assessments and protection efforts at our system, contact Public Works at 817/297-2201. For more information about your sources of water, please refer to the Source Water Assessment Viewer available at the following URL: http://gis2.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc=

Contaminants that may be present in source water include:

- -Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- -Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining,
- -Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses. -Organic chemical contaminants, including synthetic and volatile
- organic chemicals, which are by-products of industrial processes and petroleum production, and can come from gas stations, urban storm water runoff, and septic systems.
- -Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

## **OUR DRINKING WATER IS REGULATED**

Annual Water Quality Report is for the period of January 1 to December

This report is a summary of the quality of the water we provide our customers. The analysis was made by using the data from the most recent U.S. Environmental Protection Agency (EPA) required tests and is presented in the attached pages. We hope this information helps you become more knowledgeable about what's in your drinking water.

# **SOURCES OF DRINKING WATER**: The sources of

drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals, and in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may be reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPAs Safe Drinking Water Hotline at (800)426-

#### En Espanol

Este informe contiene informacion muy importante sobre la calidad de su agua potable. Por favor lea este informe o comuniquese con alguien que peuda traducer la informacion.

## **About The Following Pages**

The following tables contain scientific terms and measures, some of which may require explanation.

# **DEFINITIONS**

#### **Maximum Contaminant Level Goal (MCLG)**

The level of a contaminant in drinking water below which there is no known or expected health risk. MCLGs allow for a margin of safety.

## **Maximum Contaminant Level (MCL)**

The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

# Maximum Residual Disinfectant Level Goal (MRDLG)

The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

# Maximum Residual Disinfectant Level (MRDL)

The highest level of disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Avg: Regulatory compliance with some MCLs is based on running annual average of monthly samples.

**ppm:** Milligrams per liter or parts per million – or one ounce in 7,350 gallons of water.

**ppb:** Micrograms per liter or parts per billion – or one ounce in 7,350,000 gallons of water

na: Not applicable

NTU: Nephelometric Turbidity Units (a measure of water turbidity or

pCi/L: picocuries per liter (a measure of radioactivity)

Treatment Technique (TT): a required process intended to reduce the level of a contaminant in drinking water

## **Water Quality Data Table**

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions above

Inorganic C	Contaminants							
Collection Date	Contaminant	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Unit of Measure	Violation	Source of Contaminant
2011	Arsenic	0.349	0.349 to 0.349	0	10	ppb	N	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes.
2011	Barium	0.0144	0.0144 to 0.0144	2	2	ppm	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.
2011	Chromium	7.55	7.55 to 7.55	100	100	ppb	N	Discharge from steel and pulp mills; Erosion of natural deposits.
2014	Cyanide	0.0733	0 to 0.0733	.2	.2	ppm	N	Discharge from steel/metal factories; discharge from plastic and fertilizer factories
2014	Fluoride	1.47	0 to 1.47	4.0	4.0	ppm	N	Water additive which promotes strong teeth; erosion of natural deposits; discharge from fertilizer and aluminum factories
2014	Nitrate [measured as Nitrogen]	1.14	0 to 1.14	10	10	ppm	N	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits.
2011	Selenium	1.02	1.02 to 1.02	50	50	ppb	N	Discharge from petroleum and metal refineries; Erosion of natural deposits; Discharge from mines.
2011	Thallium	.0.2	0.2 to 0.2	0.5	2	ppb	N	Discharge from electronics, glass, and leaching from ore-processing sites; drug factories.
Radioactive (	Contaminants							
2010	Beta/Photon emitters	4.2	0 to 4.2	0	50	pCi/L*	N	Decay of natural and man-made deposits.  *EPA considers 50 pCi/L to be the level of concern for beta particles.
2010	Gross alpha excluding radon and uranium	2	0 to 2	0	15	pCi/L	N	Erosion of natural deposits.

**Synthetic Organic Contaminants Including Pesticides** 

Collection Date	Contaminant	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Unit of Measure	Violation	Source of Contaminant
2014	Atrazine	0.12	0 to 0.012	3	3	ppb	N	Runoff from herbicide used on row crops.
2014	Di (2-ethyhexyl) phthalate	0.8	0 to 0.8	0	6	ppb	N	Discharge from rubber and chemical factories.
2014	Simazine	0.09	0 to 0.09	4	4	ppb	N	Herbicide runoff.

**Volatile Organic Contaminants** 

Collection Date	Contaminant	Highest Level Detected	Levels Detected	MCLG	MCL	Unit of Measure	Violation	Likely source of Contamination
--------------------	-------------	---------------------------	--------------------	------	-----	--------------------	-----------	--------------------------------

In 2014, testing was conducted on the following contaminants; all testing resulted in levels lower than the detect levels.

1,2-Dichloropropane, Benzene, Carbon Tetrachloride, Chlorobenzene, Dichloromethane, Ethylbenzene, Styrene, Tetrachloro-ethylene, Toluene, Trichloro-ethylene Vinyl Chloride, Xylenes, cis-1,2-Dichloroethylene, o-Dichlorobenzene, p-Dichlorobenzene, trans-1,2-Dichloroethylene

Disinfectants and Disinfection By-products

Collection Date	Contaminant	Highest Level Detected	Range of Levels Detected	MCLG or MRDLG	MCL	Units	Violation	Source of Contaminant
2014	Total Haloacetic Acids	15.4	3.8 – 15.4	No goal for the total	60	ppb	N	By-product of drinking water chlorination.
2014	Total Trihalomethanes	24.9	9.2 – 24.9	No goal for the total	80	ppb	N	By-product of drinking water chlorination.
2014	Chlorine (as Cl2)	3.8	0.2 to 3.8	4	4	ppm	N	Water additive used to control microbes.

#### **Lead and Copper**

The Lead and Copper Rule protects public health by minimizing lead and copper levels in drinking water, primarily by reducing water corrsoivity. Lead and copper enter drinking water mainly from corrosion of lead and copper containing plumbing materials.

Collection Date	Contaminant	MCLG	Action Level (AL)	90 <sup>th</sup> Percentile	# Sites Over AL	Unit of Measure	Violation	Likely Source of Contamination
2014	Lead	0	0.015	0.003	1	ppb	N	Corrosion of household plumbing systems; erosion of natural deposits.
2014	Copper	1.3	1.3	0.396	0	ppm	N	Corrosion of household plumbing systems/erosion of natural deposits;

# Violations Table

The Lead and Copper Rule protects public health by minimizing lead and copper levels in drinking water, primarily by reducing water corrosivity. Lead and copper enter drinking water mainly from corrosion of lead and copper containing plumbing materials. Water samples are collected from specific addresses within the city for testing. This testing is done from an interior faucet at these specific addresses and is not done on the system's distribution lines.

testing. This testing is done from an interior faucet at these specific addresses and is not done on the system's distribution lines.								
Violation Type	Violation Began	Violation End	Violation Explanation					
FOLLOW-UP OR ROUTINE TAP M/R (LCR)	10/01/2013	09/02/2014	We failed to test our drinking water for the contaminant and period indicated. Because of this failure, we cannot be sure of the quality of our drinking water during the period indicated.					
LEAD CONSUMER NOTICE (LCR)	12/30/2013	09/02/2014	We failed to provide the results of lead tap water monitoring to the consumers at the location water was tested. These were supposed to be provided no later than 30 days after learning the results.					

If present, elevated levels of lead can cause serious health problems. Especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. City of Crowley is responsible for high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure y flushing your tap for 15 to 30 seconds or until it becomes cold or reaches a steady temperature before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

#### Coliform Bacteria/E. coli

Fecal coliforms and E. coli are bacteria whose presence indicates that the water may be contaminated with human or animal wastes. Microbes in these wastes can cause short-term effects, such as diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a special health risk for infants, young children, and people with severely compromised immune systems.

Maximum Contaminant Level	Total Coliform Maximum Contaminant Level	Highest No. of Positive	Fecal Coliform or E. Coli Maximum Contaminant Level	Total No. of Positive E. Coli or Fecal Coliform Samples	Violation	Likely Source of Contamination
0	1 positive monthly sample.	1	0	0	N*	Naturally present in the environment.

#### UCMR3

As part of an on-going evaluation program, the EPA has required us to monitor some additional contaminants/chemicals. Information collected through the monitoring of these contaminants/chemicals will help ensure that future decision on drinking water standards are based on sound science. UCMR benefits the environment and public health by providing EPA and other interest parties with scientifically valid data on the occurrence of these contaminants in drinking water. Health information is nece to know whether these contaminants pose a health risk. Public Water Systems will sample for these contaminants for four consecutive quarters from 2013 to 2015. Crowley's sampling will occur from April 2014 through March 2015. The results shown are for the first three quarters of 2014. The final quarter will appear on next year's water quality report.

Contaminant	Measure	Range of detects	2014 Level	MRL	Contaminants NOT detected	
Chlorate	ppb	0 to 119	119	20	1,2,3-trichloropropane	perfluorooctanoic acid (PFOA)
Chromium <sup>1</sup>	ppb	0 to 0.259	0.259	0.2	1,3-butadiene	perfluorononanoic acid (PFNA)
Chromium-6	ppb	0 to 0.155	0.155	0.03	chloromethane (methyl chloride)	perfluorohexanesulfonic acid (PFHpA)
Bromochloromethane	nnh	0 to 0.282	0.282	0.06	1,1-dichloroethane	perfluorobutanesulfonic acid (PFBS)
(halon 1011)	ppb	0 to 0.282	0.282	0.06	bromomethane	17-B-estradiol
Molybdenum	ppb	1.48 to 1.72	1.72	1	chlorodifluoromethane (HCFC-22)	17-α–ethynylestradiol
Strontium	ppb	216 to 445	445	0.3	1,4-dioxane	estriol, equilin, estrone
Vanadium	nnh	0 to 2.13	2.13	0.2	cobalt	testosterone
vanadium	ppb	0 to 2.13	2.13	0.2	perfluorooctanesulfonic acid (PFOS)	4-androstene-3.17-dione

Total Chromium, the sum of chromium in all its valence states, is already regulated in drinking water. As part of UCMR3, EPA requires testing for Total Chromium in the same samples used to test for Chromium-6, which is on the UCMR3 list. The value differs from what is listed in the other table because of different sampling periods. The MCL for EPOA's current total chromium regulation was determined based upon the health effects of Chromium-6.

The City of Crowley's water loss as reported on the Water Loss Audit for 2014 was 34,648,712 gallons of water.

**Fort Worth Drinking Water Year 2013 Results** 

Contaminant	Measure	MCL	2014 Level	Range of Detects	MCLG	Common Sources of Substance in Drinking Water
Gross Beta particles & photon emitters <sup>1</sup>	pCi/L	50	5.6	4 to 5.6	N/A	Decay of natural and man-made deposits of certain minerals that are radioactive and may emit forms of radiation known as photons and beat radiation
Radium 226/228 <sup>1</sup>	pCi/L	5	1	1 to 1	0	Erosion of natural deposits
Arsenic	ppb	10	1.28	0.97 to 1.28	0	Erosion of natural deposits; runoff from orchards; runoff from glass and electronics production wastes.
Atrazine	ppb	3	0.09	0 to 0.10	3	Runoff from herbicide used on row crops
Antimony	ppb	6	0.22	0 to 0.22	6	Discharge from petroleum refineries, fire retardants, ceramics, electronics, solder, test addition
Barium	ppm	2	0.07	0.05 to 0.07	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
Chromium (Total)	ppb	100	0.55	0.00 to 0.55	100	Discharge from steel and pulp mills, erosion of natural deposits
Cyanide	ppb	200	113	0 to 113	200	Discharge from plastic and fertilizer factories; discharge from steel and metal factories
Fluoride	ppm	4	0.62	0.27 to 0.62	4	Water additive which promotes strong teeth; erosion of natural deposits; discharge from fertilizer and aluminum factories
Nitrate (measured as Nitrogen)	ppm	10	0.82	0.28 to 0.82	10	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Nitrite (measured as Nitrogen) <sup>4</sup>	ppm	1	0.03	0 to 0.03	1	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Selenium	ppb	50	3.98	2.92 to 3.98	50	Discharge from petroleum and metal refineries; Erosion of natural deposits; Discharge from mines
Bromate	ppb	10	8.92	0 to 8.92	0	Byproduct of drinking water disinfection
Haloacetic Acids	ppb	60	11.5	0 to 11.5	N/A	Byproduct of drinking water disinfection
Total Trihalomethanes	ppb	80	26	0 to 26	N/A	Byproduct of drinking water disinfection
Total Coliforms (including fecal coliform & E. coli)	% of positive samples	Presence in 5% or more of monthly samples	Presence in 2.2% of monthly samples	0 to 2.2%	0	Coliforms are naturally present in the environment as well as feces; fecal Coliforms and E. coli only come from human and animal fecal waste
Turbidity <sup>2</sup>	NTU	TT	$\begin{array}{c} 0.0.29 \text{ Highest single} \\ \text{Result} \\ 100\% \text{ Lowest monthly \%} \\ \text{of samples} \leq 0.3 \text{ NTU} \end{array}$	N/A	N/A	Soil Runoff
Contaminant	Measure	MRDL	2014 Level	Range of Detects	MRDLG	Common Sources of Substance in Drinking Water
Chloramines	ppm	4	1.13	0.2 to 3.8	4	Water additive used to control microbes
Contaminant	High	Low	Average	MCL	MCGL	Common Sources of Substance in Drinking water
Total Organic Carbon <sup>3</sup>	1	1	1	TT = % removal	N/A	Naturally occurring
l	•	•	•			•

Because Fort Worth historically has had low levels of radionuclides in its water, TCEQ has Fort Worth on a reduced monitoring schedule. The test results shown are from 2011 through 2013.

<sup>2</sup>Turbidity is a measure of the cloudiness of water. It is monitored because it is a good indicator of the effectiveness of the filtration system.

<sup>&</sup>lt;sup>3</sup>Total Organic Carbon is used to determine disinfection by-product precursors. Fort Worth was in compliance with all monitoring and treatment technique requirements for disinfection by-product precursors.

<sup>&</sup>lt;sup>4</sup>The state last sampled for Nitrite in 2013

#### **Unregulated Disinfection By-products**

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in

determining the occurrence of unregulated contaminants in drinking water and whether future regulation is warranted

Contaminants	unit	Range of Detections	2014 Level	MCL	MCT (†	Common Sources of Substance in Drinking Water	
Chloral Hydrate	ppb	0.26 to 0.49	0.49	Not Regulated	None	By-product of drinking water disinfection	
Bromoform	ppb	1 to 3.6	3.6	Not Regulated	None		
Bromodichloromethane	ppb	2.8 to 9	9	Not Regulated		By-products of drinking water disinfection;	
Chloroform	ppb	2 to 14.2	14.2	Not Regulated		not regulated individually; included in Total Trihalomethanes	
Dibromochloromethane	ppb	2.2 to 6.8	6.8	Not Regulated	60		
Monochloroacetic Acid	ppb	0 to 3.5	3.5	Not Regulated	70		
Dichloroacetic Acid	ppb	3 to 5.7	5.7	Not Regulated		By-products of drinking water disinfection;	
Trichloroacetic Acid	ppb	0 to 1.8	1.8	Not Regulated	20	not regulated individually; included in	
Monobromoacetic Acid	ppb	1 to 2	2	Not Regulated	None	Haloacetic Acids	
Dibromoacetic Acid	ppb	0 to 3.3	3.3	Not Regulated	None		

#### TCEQ accesses raw water supplies

TCEQ completed an assessment of Fort Worth's source water and the results indicate some of the sources are susceptible to certain contaminants. The sampling requirements for our water system are based on this susceptibility and previous sample data. Any detection of these contaminants will be found in this water quality report.

For more information on our source water assessments and protection efforts at Fort Worth's system, contact the Fort

Worth laboratory at 817-392-5900. Some of this source water assessment information is available on Texas Drinking Water Watch at www.tceq.texas.gov/gis/swaview.

For more information on the source water assessments, please contact us.

# Microorganism testing shows low detections

TRWD monitors the raw water at all intake sites for Cryptosporidium, Giardia Lambia and viruses. The source is human and animal fecal waste in the watershed.

Viruses, Cryptosporidium and Giardia Lambia, microbial parasites common in surface water, were not detected in any of the 2014 sampling.

#### Data gathering to determine if more regulation needed

Water utilities in the United States monitor for more than 100 contaminants and must meet 91 regulations for water safety and quality.

But should other contaminants be regulated? The 1996 Safe Drinking Water Act amendments require that once every five years EPA issue a new list of no more than 30 unregulated contaminants to be monitored by public water systems. This monitoring provides a basis for future regulatory actions to protect public health.

The first Unregulated Contaminant Monitoring Rule (UCMR 1) was published on Sept. 17, 1999, the second (UCMR 2) was published on Jan. 4, 2007 and the third (UCMR 3) was published on May 2, 2012. Fort Worth did not detect any of the contaminants in the UCMR 1 and UCMR 2 testing.

The third unregulated Contaminant Monitoring Rule includes assessment for 21 chemical contaminants, 7 hormones and two viruses. The virus

testing did not impact Fort Worth. This testing was limited to small groundwater systems that do not disinfect.

UCMR benefits the environment and public health by providing EPA and other interested parties with scientifically valid data on the occurrence of these contaminants in drinking water. Health information is necessary to know whether these contaminants pose a health risk.

Public water systems will sample for these contaminants for four consecutive quarters from 2013 to 2015. For Worth's sampling occurred from June 2013 through March 2014. The results shown are for the final quarter of sampling. The first three quarter's results appeared in last year's annual report  $of the \ 2013 \ water \ quality. \ Additional \ information: \ water. epa.gov/lawsregs/rules regs/sdwa/ucmr/ucmr3/index.cfm$ 

	UCMR3								
Fort Worth's testing detected only four of the 21 chemical contaminants and none of the seven hormones.									
Contaminant	Measure	Range of Detects	2014 Level	MRL	Common Sources of Substance				
Vanadium	ppb	0.62 to .86	.86	0.2	Naturally-occurring elemental metal; used as vanadium pentoxide which is a chemical intermediate and a catalyst				
Molybdenum	ppb	1.64 to 2.1	2.1	1	Naturally-occurring element found in ores and present in plants, animals and bacterial; commonly used form molybdenum trioxide used as a chemical reagent				
Strontium	ppb	260 to 290	290	0.3	Naturally-occurring element; historically, commercial use of strontium has been in the faceplate class of cathode-ray tube televisions to block x-ray emissions				
Chromium <sup>1</sup>	ppb	not de	tected	0.2	Naturally-occurring element; used in making steel and other				
Chromium-6	ppb	o to 0.068	0.068	0.03	alloys; chromium-3 or -6 forms are used for chrome plating, dyes and pigments, leather tanning, and wood preservation				
Chlorate	ppb	0 to 170	170	20	Agricultural defoliant or desiccant; disinfection byproduct; and used in production of chlorine dioxide				

'Total Chromium, the sum of chromium in all its valence states, is already regulated in drinking water. As part of the UCMR3, EPA requires testing for Total Chromium in the same samples used to test for Chromium 6, which is on the UCMR3 list. The value differs from what is listed in the table on Page 5 because of different sampling periods. The MCL for EPA's current total chromium regulation was determined based upon the health effects of Chromium 6.

UCMR3 contaminants not detected

Chemicals **Hormones** 1,2,3-trichloropropane perfluorooctanesulfonic acid (PFOS) 17-B-estradiol -butadiene perfluorooctanoic acid (PFOA) 17-α-ethynylestradiol chloromethane (methyl chloride) perfluorononanoic acid (PFNA) estriol 1,1-dichloroethane perfluorohexanesulfonic acid (PFHxS) equilin bromomethane perfluoroheptanoic acid (PFHpA) estrone Bromochloromethane (Halon 1011) perfluorobutanesulfonic acid (PFBS) testosterone chlorodifluoromethane (HCFC-22) 4-androstene-3,17-dione 1,4-dioxane cobalt

# Effective April 17, 2014: Current Watering Restrictions were made permanent.

MONDAY: **NO** Watering allowed

TUESDAY & FRIDAY: Non-residential sites (apartments, businesses, parks, common areas)

WEDNESDAY & SATURDAY: Residential addresses ending in 0, 2, 4, 6, 8

THURSDAY & SUNDAY: Residential addresses ending in 1, 3, 5, 7, 9
